

# BioBlend Dispenser

Achieve simplicity and versatility in bio fuel delivery with Compac's BioBlend dispenser.

## The BioBlend is based on Compac's proven technology, developed over many years in the fuel industry.

Compac engineers have developed the BioBlend dispenser to simplify the handling of bio fuels. By allowing the blending of the fuels to occur at the time of delivery and not premixing in a tank, fuel suppliers have greater control on product inventory and tank capacity.

### → Features of the BioBlend Dispenser

The BioBlend dispenser is available in a Master frame and also as a ComFutra with the Fuel Management System (FMS) fully integrated. It can be configured as a Pump or a Dispenser with flow rates to 400 lpm.

Taking feed from mineral diesel and biodiesel tanks, the BioBlend dispenser meters these in variable ratios, delivering through a single hose and nozzle.

Set the ratio to be the same for all deliveries. Ratios can vary in 5% increments from 5% to 20% biodiesel.

Installation and servicing of the BioBlend dispenser is cost effective and straight forward.

Recording of deliveries is made by the FMS with two options for accessing transactions. They can either be stored in the unit and downloaded via a USB connection to the operator's computer, or they can be uploaded automatically via ADSL or 3G wireless to CompacOnline. Access for authorised users is available over the internet to Compac's secure website.

*Approvals: Compac Dispensers have received certification and approvals in many different countries. Copies of these are available on our website.*
