Compac's USB Fuel Management System cleverly utilises the best features of a USB data transfer system, for easier fuel management.

The USB Fuel Management System

- Removes the need for complex computer software. Simply connect your authorised USB stick to the PC in order to display past transactions in an easy-to-use spreadsheet

- Can hold up to 4000 transactions

- Can upload new card data - add or remove cards/users from the system as required

- Change pricing

- Simple 'Plug and Play' procedures

Features of the USB FMS Report

- Add or remove users via any type USB stick (authorised by you)

- Saves transactions as an CSV file, directly to the USB stick

- Enables data to be easily used for reconcilation reports

Allows You to View

- Vehicle

- User

- Location

- Time and date

- Amount dispensed

- Product used

Operation of the USB FMS is simple

1. Refuelling

- Customer passes their key/card

- Enters pin number (if required)

- Enters ODO / engine hours

- Enters hose or pump number

- Lifts correct nozzle from pump, fills vehicle

2. Collection of Transactions

- User inserts USB stick

- Follow prompts on display

- Transactions exported as CSV file onto USB stick

- Information is displayed on a spreadsheet
